This report provides the detailed results for each question from this school/district's 2017-18 *California Healthy Kids Survey* (CHKS), presented in tables organized by topic.

The CHKS, along with its two companion surveys—*California School Staff Survey* (CSSS) for staff and the *California School Parent Survey* (CSPS)—is a service of the California Department of Education (CDE). These three surveys form the *California School Climate, Health, and Learning Surveys* (CalSCHLS) System, the largest, most comprehensive state effort in the nation to regularly assess students, staff, and parents at the local level to provide key data on school climate and safety, learning supports and barriers, and stakeholder engagement, as well as youth development, health, and well-being. Exhibit 1, at the end of the Preface, presents the major school-related domains and constructs assessed by CalSCHLS.

These surveys grew out of CDE's commitment to helping schools promote the successful cognitive, social, emotional, and physical development of all students; create more positive, engaging school environments for students, staff, and parents; and ensure college and career readiness. They provide a wealth of information to guide school improvement and **Local Control and Accountability Plan** (LCAP) efforts, particularly in regard to the state priorities of enhancing school climate, pupil engagement, parent involvement, and addressing the needs of vulnerable groups.

Factsheets, guidebooks, and other resources to help in understanding and using CHKS results are available for downloading from the survey website (chks.wested.org), including *Helpful Resources for Local Control and Accountability Plans* (chks.wested.org/resources/LCAP-Cal_SCHLS.pdf). The California Safe and Supportive Schools website (CaliforniaS3.wested.org) provides information and tools helpful in implementing effective strategies to address the needs identified by the survey.

The CalSCHLS Technical Assistance Center offers a Data Workshop to help identify local needs and develop action plans to meet those needs, including a *Listening to Students Workshop* for involving student voice in the process (see below).

THE SURVEY

The California Department of Education (CDE) has funded the CHKS since 1997 to provide data to assist schools in: (1) fostering safe and supportive school climates, social-emotional competencies, and engagement in learning; (2) preventing youth health-risk behaviors and other barriers to academic achievement; and (3) promoting positive youth development, resilience, and well-being. A thorough understanding of the scope and nature of these student behaviors, attitudes, experiences, and supports is essential for guiding school improvement and academic, prevention, and health programs.

The CHKS is not just a standalone instrument but a data collection system that districts can customize to meet local needs and interests. The secondary-school CHKS consists of a required general Core Module

and a series of optional, supplementary topic-focused modules that districts can elect to administer. Districts may also add their own questions of local interest in a custom module. Table 1 indicates the modules administered by the district/school.

Core Module

As outlined in Exhibit 1, the Core Module consists of key questions, identified by an expert advisory committee, that are considered most important for schools to guide improvement of academic, health, and prevention programs and promote student achievement, college and career readiness, positive development, and well-being. The great majority of the questions are school-specific, including the following indicators:

- Student grades, truancy, attendance rate and reasons for missing school, academic motivation, and school connectedness, as indicators of engagement;
- The levels of students' three fundamental developmental supports (protective factors) that promote positive academic, social, and emotional outcomes: experiences of caring adult relationships, high expectations, and opportunities for meaningful participation at school;
- Perceived safety and the frequency and type of harassment and bullying at school; and
- Levels of violence, substance use, and crime-related behavior (e.g., weapons possession) at school.

The Core Module also includes a wide range of demographic questions to help districts identify and address the needs of significant and vulnerable student subgroups, including those required to be included in the LCAP efforts. These include race/ethnicity, gender, and socioeconomic status; homeless, migrant, and foster status; and English language proficiency.

What's New? For 2017-18, the following improvements are made to the Core Module:

- Added questions assessing frequency of school absences; lifetime frequency of heroin use, and vaping, eating, or drinking marijuana; perceived harm and availability of e-cigarettes; being an immigrant as a reason for being harassed or bullied;
- Modified sexual orientation question to better assess gender identity; and
- Expanded Opportunities for Meaningful Participation scale questions for better reliability.

Supplemental School Climate Module

To further support school improvement efforts and the LCAP process, a supplementary School Climate Module is available. It provides additional data on student academic mindset, school academic supports, discipline/order, supports for social-emotional learning, bullying prevention and positive peer relationships, respect for diversity, and the quality of the physical environment (download from chks.wested.org/administer/download/supplemental/#clim). These questions are also included in the staff survey, so you can compare staff and student perceptions on the same constructs.

Supplemental Social Emotional Health Module (SEHM)

The SEHM greatly enhances the value of the CHKS as a strength-based assessment of positive emotions, engagement, ability to build and maintain relationships, and other social-emotional competencies linked to student mental health and well-being, academic success, and college and career readiness. It includes 56 items that capture the totality of core adolescent psychological assets.

SURVEY ADMINISTRATION AND SAMPLING

School staff administered the survey, following detailed instructions provided by CDE that were designed to assure the protection of all student and parental rights to privacy and to maintain confidentiality. Students were surveyed only with the consent of parents or guardians. Student participation was voluntary, anonymous, and confidential.

- Table A1.1 gives the target sample of students and the final number and percent of students who completed the survey (the participation response rate).
- The Appendix lists all the secondary schools in the district that were eligible to participate in the survey and the percentage of students enrolled in each of them that completed the survey.

THE REPORT

The survey results are reported in tables, organized by topic, that provide the percentages responding to each question response option by grade level. Because it is just as important to identify the positive behaviors of youth as it is to identify the risks they face, the tables reporting risk-behavior data include the percentages of youth who responded negatively (did not engage in the behavior).

Racial/Ethnic and Gender Results

Summary tables provide key findings (e.g., safety, harassment, developmental supports, school connectedness) disaggregated by race/ethnic categories and gender (see Sections 9 and 10). Schools can request supplementary reports disaggregating all their CHKS results by the race/ethnicity or gender of students or by other demographic categories (see Next Steps below).

UNDERSTANDING THE DATA

Care must be taken to understand the factors that can impact the quality, validity, and generalizability of the results, such as changes that occur in survey content, administration, and/or sample characteristics between administrations. The following are a few of the key issues that should be kept in mind. A more detailed discussion of these topics can be found in the *CHKS Guidebook to Data Use and Dissemination* (download chks.wested.org/resources/chks_guidebook_3_datause.pdf).

Sample Characteristics.

Among the most important factors affecting the quality of survey results is the level and type of student participation. The validity and representativeness of the results will be adversely affected if the student response rate is lower than 70%. One indication of the survey's representativeness is how accurately the sample reflects the gender and ethnic composition of the student enrollment. Even if the response rate is low, the results provide an indication of what those students who did respond felt about the school and their experiences and behavior.

Changes Between Survey Administrations.

Many factors besides real changes in behavior, attitudes, or experiences among students may account for changes in results from administration to administration. Changes may be due to differences over time in the characteristics or size of the sample of students who completed the survey, changes in the questions themselves, or differences between time periods in which the survey was administered (e.g., some risk behaviors tend to increase as students age, or may increase during holidays or social events).

RESOURCES

The CHKS website contains numerous guidebooks and other resources for using and understanding survey results.

- *CHKS Guidebook to Data Use and Dissemination* provides step-by-step instructions on how to interpret survey results and effectively disseminate them (download chks.wested.org/resources/chks_guidebook_3_datause.pdf).
- CHKS **factsheets** (chks.wested.org/using-results/factsheets) analyze key topics at the state level, show how data variables are related, and offer suggestions for how data can be analyzed at the local level.
- *Making Sense of School Climate* provides a discussion of all the CalSCHLS survey items that relate to school climate (download californiaS3.wested.org/resources/S3_schoolclimateguidebook_final.pdf).
- *Helpful Resources for Local Control and Accountability Plans* (chks.wested.org/resources/LCAP_Cal_SCHLS.pdf) describes how survey items align with LCAP priorities and indicators. Also available is an LCAP-related PowerPoint presentation (chks.wested.org/training-support/workshops-presentations).
- The *School Climate Connection Newsletter* provides monthly announcements of resources, tools, webinars and workshops, and research. Sign up on the CHKS or CaliforniaS3 websites.
- CDE's **California Safe and Supportive Schools** website (CaliforniaS3.wested.org) contains a wealth of information and tools related to school climate improvement and social-emotional learning. It includes factsheets analyzing CalSCHLS data and *What Works Briefs* that provide guidance on strategies to implement.

NEXT STEPS

Receiving this report is just a beginning step in a data-driven decision-making process of continuous improvement. The following describes some followup steps you should take and some custom services (additional fees apply) available from the CalSCHLS TA Center to help in fostering effective use of the results and provide additional information to support school and program improvement efforts and the LCAP process.

Engage Students, Staff, and Parents in Reviewing the Results and Action Planning

First and foremost, engage students, staff, parents, and community stakeholders in reviewing and exploring the meaning of the results and obtain their input into how the school might better meet the identified needs and into the development of a detailed action plan. This communicates to stakeholders that you value their input into how to improve the schools and gives them an opportunity for meaningful participation. This helps enhance pupil engagement and parent involvement, two LCAP priorities. Their input, in turn, will help in identifying school needs and developing an effective response. It will also promote higher rates of participation the next time the survey is administered, as stakeholders will see how the data has been used for positive purposes.

As part of this process, it is highly recommended that you conduct a structured *Listening to Students Workshop* in which you explore with students, as adults observe, the meaning of survey results and obtain their input on how to address the needs identified by the survey and school improvement in general. These

workshops were found to be a highly effective in fostering school climate improvements as part of CDE's Safe and Supportive School Projects (see CaliforniaS3.wested.org). For more information, email schoolclimate@wested.org.

Compare Results with Other Data

The value of your CHKS results will be greatly enhanced if examined in the content of the following sources of related data.

- **Staff and Parent Surveys.** The results of this student survey should be compared to those obtained from the CalSCHLS surveys of school staff and parents. It is important to determine how consistent are student, staff, and parent perceptions and experiences. If you did not administer these companion surveys, consider doing so next time.
- **Elementary CHKS Results.** Examine how the results from 7th, 9th, and 11th graders compare with those from 5th graders on common indicators to see the developmental trajectory in the results and explore what programs at the elementary level might help mitigate problems that are evident among older students.
- **Other Data.** Examine how the results compare with other data typically collected by schools that relate to the variables assessed, such as discipline referrals, school demographic information, school vandalism costs, and behavioral observations in classrooms.

Data Workshop

To assist in your review of the survey results, you can request the CalSCHLS TA Center to conduct a structured, customized Data Workshop. In this workshop, a survey specialist works with district stakeholders to promote better understanding of the results and to identify local needs that need to be addressed. The workshops can also include engaging stakeholders in developing a detailed Action Plan and timetable for meeting those needs using evidence-based strategies.

For more information, contact your CalSCHLS TA Center (call 888.841.7536) or email schoolclimate@wested.org.

Request Additional Reports and Data

As you review your data with stakeholders, you may find that additional data needs emerge. The following custom services (additional fees apply) are available through the CalSCHLS TA Center to help delve more deeply into your survey results and foster more effective use of the results in support of school and program improvement efforts and the LCAP process.

School Reports and School Climate Report Cards

If the schools in the district vary significantly in demographics, programs, or other characteristics, consider requesting individual reports for each school (a fee applies). Two types of reports are available:

- A full report with all the survey results; and
- A short, user-friendly, graphic **School Climate Report Card** that provides results across eight domains of school climate and provides an overall **School Climate Index** score based on those domains. (View a sample report: visit californiaS3.wested.org/resources/California_State_SCRC_1314.pdf).

District School Climate Report Card

For districts that survey all their schools, a district-level School Climate Report Card can be requested. This is a powerful, useful tool for guiding efforts to meet the school climate and pupil engagement priorities for the Local Control and Accountability Plan.

Disaggregated Reports

The staff of the Regional TA Centers can produce full reports that look at how results vary by demographic subgroups (e.g., race/ethnicity as discussed above, or by youth who are low in academic motivation compared those who are high). This is particularly important given the LCAP requirement that districts identify and address the needs of underserved, vulnerable subgroups. This helps in understanding the meaning of the results and developing interventions that target groups most in need.

Analyze Dataset

The complete dataset is available electronically for additional analysis (there is a small fee for preparation). The dataset enables analyses of patterns in the results, how they are interrelated, and how they vary by different subgroups of students and across schools within a district. You can also request an analysis from the CalSCHLS TA Center as a custom service.

Add Questions to Your Next Surveys

Determine what additional information is needed from students to guide school improvement efforts and add questions to your next CHKS, staff, or parent surveys. All three surveys are designed so that schools can add additional questions to help them conduct a more individualized and comprehensive assessment.

Question HS/MS A.13-16: How well do you understand, speak, read, and write English?... Understand English... Speak English... Read English... Write English.

Notes: Cells are empty if there are less than 10 respondents.

English Language Proficiency was determined by creating a scale score using four survey questions - how well do you understand... speak... read... and write English. Response options are reverse coded so higher values indicate higher English proficiency level (“Not at all” (1); “Not well” (2); “Well” (3); and “Very well” (4)). The scale score was computed by averaging the survey responses. Respondents are categorized as “Proficient” or “Not Proficient” based on the English language proficiency scale.

Proficient: students with average item response > 3.5; and

Not Proficient: students with average item response ≤ 3.5.
